

**Text: McMillian/McGraw-Hill's "Science: A Closer Look"**

Fifth Grade Science exposes students to a variety of science areas (chemistry, weather, physics, beach ecology, physical science) through a combination of experiments and use of textbook. Students will learn more about the Creator and will learn about God and His handiwork through observing and studying His creation. Louis Pasteur said, "Into His tiniest creatures, God has placed extraordinary properties." Students will see God's magnificent power and creative work from the simplest of molecules to the grandest of stars in the universe. Students will use the scientific method to help explore God's creation. Note-taking and study skills are emphasized during this course.
